# Results from the 1st year of data taking with the MAGIC telescope

**Daniel Kranich**

Institute for Particle Physics, ETH Zürich

**Abstract.** The MAGIC Cherenkov telescope is located on the Canary island La Palma at 2200m above sea level. The main objective is the investigation of Gamma-ray sources in the energy range from 50 GeV up to several TeV utilizing an effective collection area in the order of  $10^5 \text{ m}^2$ . Here I present a summary of the MAGIC observations which have been carried out since the end of the commissioning phase in October 2004.
