Ground based Cherenkov telescopes: Data reduction and analysis

Dieter Horns

Institut für Astronomie und Astrophysik, Eberhard Karls Universität,
Tübingen

Abstract. Ground based Cherenkov telescopes have become useful tools for astroparticle physics and multi-wavelength astrophysics. However, the instruments' data are only available for the consortia operating these "experiments". Within these consortia a multitude of approaches to data analysis have been developed and implemented. Aim of this talk is to provide a look behind the scenes: how the data are reduced and analysed. Finally, I will discuss possible strategies on how to make data available to a wider community of Astro(particle)physicists.

Additional Information

The seminars are given in the ISDC "Pavillon" building
Address: INTEGRAL Science Data Centre, ch. d'Écogia 16, CH-1290 Versoix
WWW: ISDC Seminars: <http://isdc.unige.ch/?Science+seminars>
